WORKFLOW

1. GitHub Setup
2. Gathering Dataset
3. IBM Cognos Setup
4. Working with IBM Cognos
5. Working with dataset
6. Project Review

GitHub Setup

GitHub is a code hosting platform for version control and collaboration. It lets you and others work together on projects from anywhere. This tutorial teaches you GitHub essentials like repositories, branches, commits, and pull requests.

Gathering Dataset / Working With Dataset

A data set is a collection of related, discrete items of related data that may be accessed individually or in combination or managed as a whole entity. A data set is organized into some type of data structure.

IBM Cognos Setup / Working

IBM Cognos Business Intelligence is a web-based integrated business intelligence suite by IBM. It provides a toolset for reporting, analytics, scorecarding, and monitoring of events and metrics. The software consists of several components designed to meet the different information requirements in a company.

Project Review

A project review is a process that a business uses to evaluate the success of a particular project and decide whether it should continue to receive resources. A project review can mean both a meeting with the project team to assess the status of a current project or a review at the end of a project.
